

Important

- db x-trackers* (*This includes synthetic ETFs) is an umbrella fund with a series of different sub-funds (each a “Sub-Fund”) which are exchange-traded funds (“ETFs”) tracking different underlying indices with different risk profiles.
- The shares of the Sub-Funds which invest in a single country or sector are likely to be more volatile than a broad-based fund as it is more susceptible to fluctuations in value resulting from adverse conditions in that single country or sector.
- The shares of the Sub-Funds may trade at a discount or premium to their net asset value (“NAV”).
- An investment in the shares of the Sub-Funds may directly or indirectly involve exchange rate risk.
- Investment involves risks. The Sub-Funds may not be suitable for all investors. Prospective investors should carefully read the Hong Kong Prospectus for further details on product features and risks, and should consider seeking independent professional advice in making their assessment.

Indirect Replication Funds

- Certain Sub-Funds adopt an indirect investment policy (also known as “synthetic replication”) (each an “Indirect Replication Fund”) by investing in swap transaction(s), which is a financial derivative instrument, linked to an underlying index. Currently, Deutsche Bank AG (“DB”) is the only swap counterparty of all Indirect Replication Funds. Investors in an Indirect Replication Fund are therefore subject to the counterparty and credit risk of DB.
- Each Indirect Replication Fund either puts in place a collateral arrangement where collateral securities are pledged in favour of such Indirect Replication Fund or invests in a portfolio of securities (“invested assets”), both with a view to ensure that the net exposure of such Indirect Replication Fund to DB is limited to no more than 0% of its NAV at the end of a trading day. The collateral securities and invested assets generally are not constituents of the underlying index. These arrangements are subject to risks, including failure on the part of DB to fulfil its obligations under the swap or collateral arrangements, a substantial drop in market value of the invested assets or collateral securities, settlement risk, or the insolvency or default of DB.
- Insolvency or default of DB may lead to dealing in the shares of the Indirect Replication Funds being suspended, and the Indirect Replication Funds may suffer significant losses and may even be terminated.
- Both the management company and the swap counterparty of the Indirect Replication Funds belong to DB Group. Furthermore, DB acts as swap counterparty and swap calculation agent in respect of all the Indirect Replication Funds to which the Hong Kong Prospectus relates. DB is also the Index Sponsor for the underlying indices of some of the Indirect Replication Funds. All of these may give rise to potential conflicts of interest.

Direct Replication Funds

- Certain Sub-Funds adopt a direct investment policy (each a “Direct Replication Fund”) by directly investing in a portfolio of transferable securities that may comprise all or a substantial number of the constituents of the relevant underlying index broadly in proportion to the respective weightings of the constituents, or other eligible assets.
- A Direct Replication Fund may utilise financial derivative instruments (“FDIs”) for investment and/or hedging purposes. The use of derivatives exposes a Direct Replication Fund to additional risks, including volatility risk, leverage risk, liquidity risk, correlation risk, counterparty risk, legal risks and settlement risks.
- Due to various factors, including fees, legal or regulatory restrictions and certain securities being illiquid, it may not be practicable to purchase all of the constituents in proportion to their weighting in the underlying index. A Direct Replication Fund will be subject to a greater tracking error in such circumstances.
- A Direct Replication Fund entering into a securities lending transaction is subject to counterparty risk, collateral risk, limited nature of indemnity from securities lending agent risk, operational risk and conflicts of interests risk.

Emerging market ETFs

- The investment objective of certain Sub-Funds is to track the performance of certain emerging markets and as such, the Sub-Funds are subject to a greater risk of loss than investments in a developed market due to, among other factors, greater political, economic, foreign exchange, liquidity and regulatory risks.

A-Shares ETFs

- The investment objective of certain Indirect Replication Funds (“A Shares Sub-Funds”) is to track the performance of an index comprising A shares listed in the PRC. Each A Shares Sub-Fund seeks exposure to the relevant index by entering into swap transaction(s) with DB, which is a qualified foreign institutional investor (“QFII”).
- Given that the A-share market is considered volatile and unstable (with the risk of suspension of a particular stock and/or the whole market, whether as a result of government intervention or otherwise), the subscription and redemption of the shares of the A Shares Sub-Funds may also be disrupted.
- Currently QFIIs are temporarily exempt from PRC capital gains tax with respect to gains derived from the trading of A shares. When such exemption expires, the valuation of the swap transaction(s) may be negatively impacted to reflect PRC capital gains tax payable by DB in relation to the swap transaction(s).
- Any changes to the QFII regulation may have a detrimental impact on the ability of the A Shares Sub-Fund to achieve its investment objective. In the worst case scenario, this could lead to the A Shares Sub-Fund being terminated.
- Each A Shares Sub-Fund is subject to emerging market risk as a result of tracking the performance of the PRC market.
- Each A Shares Sub-Fund is also subject to concentration risk as a result of tracking the performance of a single country (the PRC) and sector (except for db x-trackers CSI300 UCITS ETF* (*This is a synthetic ETF)). A Sub-Fund which invests in a single country or sector is likely to be more volatile than a broad-based fund as it is more susceptible to fluctuations in value resulting from adverse conditions in that single country or sector.

ETFs which offer Share Class “D” Distribution Shares

- db x-trackers* (*This includes synthetic ETFs) may pay a dividend even where there is no net distributable income (defined as investment income (i.e. dividend income and interest income) minus fees and expenses) attributable to the relevant share class. In other words, such dividend may be treated as being paid out of the capital of a Sub-Fund.
- Alternatively, db x-trackers* (*This includes synthetic ETFs) may pay a dividend out of gross income while charging all or part of a Sub-Fund’s fees and expenses to the capital of that Sub-Fund, resulting in an increase in the distributable income for the payment of dividends by that Sub-Fund. In other words, such dividend may be treated as being effectively paid out of the capital of that Sub-Fund.
- Payment of dividends out of capital amounts to a return or withdrawal of part of an investor’s original investment or from any capital gains attributable to that original investment.
- Any distributions involving payment of dividends out of a Sub-Fund’s capital or payment of dividends effectively out of a Sub-Fund’s capital may result in an immediate reduction of the NAV.

Investors should not make investment decisions based only on this document.

db x-trackers MSCI Pakistan IM Index UCITS ETF* (*This is a synthetic ETF)

a sub fund of db x-trackers.

db X-trackers ETFs - Deutsche AM Exchange Traded Funds

db X-trackers is Deutsche Bank Asset Management's exchange-traded funds (ETF) division. ETFs are regulated, open-ended investment funds that trade on stock exchanges just like any other listed, tradable security. They combine in a single, easy to use product the key intraday trading and liquidity elements of stocks with the diversification offered by an index fund. Since launch in 2007 db X-trackers has grown rapidly. It now has around HKD 425.65 bn in assets under management (as of December, 2016) across more than 300 products, making db X-trackers the second largest ETF provider in Europe and amongst the top five globally.

Fund Information	
Fund name	db x-trackers MSCI Pakistan IM Index UCITS ETF* (*This is a synthetic ETF)
ISIN	LU0755278701
UCITS IV compliant	Yes
Share class currency	USD
Investment Methodology	Indirect Replication*
Portfolio Structure	Fully Collateralised Swap
Fund launch date	19 September 2011
Share class launch date	27 March 2013
TER	0.85% p.a.
Financial year end	31 December
Income treatment	Reinvestment
NAV per Share	USD 2.43 (30 December 2016)
Total Fund Assets	USD 35,950,074 (30 December 2016)

*ETF enters a swap agreement with an investment bank whereby the bank provides the ETF with the returns of the index adjusted to reflect certain index replication costs or enhancements.

Key Risks

- Stock exchange liquidity with low bid/offer spread
- Low cost index investment, efficient alternative to traditional mutual funds
- Maximum 10% net counterparty risk exposure on derivative transactions, in accordance with UCITS IV investment restrictions. The credit rating of the Swap Counterparty (Deutsche Bank AG) can be obtained at www.db.com
- There will be a difference in performance (or "tracking error") between the net asset value of db x-trackers ETFs and the relevant index being tracked due to the impact of the All-In Fee (among other factors)
- db x-trackers ETFs may trade in limited markets including but not limited to circumstances where the liquidity of the underlying index constituents may be limited as a result of the imposition of trading restrictions
- The value of an investment in db x-trackers ETFs may go down as well as up; past performance is no guarantee of future returns.
- For further information on risk factors, prospective investors are invited to refer to the relevant section of the Hong Kong Prospectus

MSCI Pakistan Investable Market Total Return Net Index

The Index is designed to reflect the performance of the shares of certain companies in Pakistan. The companies making up the Index are large, medium and small companies based on the combined value of a company's readily available shares as compared to other companies. The Index aims to represent 99% of the readily available shares listed on stock exchanges in Pakistan. A company's weighting in the Index depends on its relative size. The Index is calculated on a total return net basis which means that all dividends and distributions by the companies are reinvested in the shares after tax. The Index is reviewed and rebalanced at least quarterly.
