Vanguard S&P 500 Index ETF

(HKD: 3140 / RMB: 83140 / USD: 9140)

An exchange-traded fund

IMPORTANT: Investment involves risk, including the loss of principal. Investors are advised to consider their own investment objectives and circumstances in determining the suitability of an investment in the Vanguard S&P 500 Index ETF (the "Fund"). If you are in any doubt, you should seek professional advice. Investors should refer to the fund prospectus for further details, including the product features and risk factors. Investors should not base investment decisions on this marketing material alone. Investors should note:

- The Fund aims to provide investment results that, before fees and expenses, closely correspond to the performance of the S&P 500 Index ("Underlying Index").
- The Fund concentrates its investment in the U.S. securities market which may be more volatile than other securities markets and may be subject to a higher level of risks compared to investing in a more diversified portfolio/ strategy. Investment in the U.S. securities market may involve a greater risk of loss than investing in other markets and may result in a higher risk of loss to the Fund. Changes in financial regulations, tax regulations or governmental regulations on trade, decreasing imports or exports, terrorist acts, political movements and/or an economic crisis or recession in the U.S. may have a significant adverse effect on the U.S. economy. Such changes may have a negative impact on the securities held by the Fund.
- The Fund invests in financial derivatives instruments ("FDIs"), which are more sensitive to changes in market prices of the underlying assets, and investing in FDIs may expose investors to a higher degree of fluctuation and the Fund may be exposed to credit risk on the counterparties with which it trades FDIs.
- The units of the Fund are traded on the Stock Exchange of Hong Kong Limited ("SEHK"). Their prices on the SEHK are based on secondary market trading factors, and the Fund's market prices may deviate significantly from the net asset value.
- The limited availability of RMB outside the PRC may affect the liquidity and trading price of RMB traded units. Investors who buy and sell units traded in RMB counter are exposed to foreign exchange currency risk arising from the fluctuations between the base currency and the RMB.
- The market price of units traded in each HKD, RMB and USD counter may deviate from each other significantly. Further, if there is a suspension of the inter-counter transfer of units between the counters and/or any limitation on the level of services by brokers, investors will only be able to trade their units in one counter only.
